The Cold War paved the way for computers to be used as weapons. Jake Downing was there from the beginning. He was America's first cyber spy. Jake grew up in rural America during the 50's, went to war for America and was wounded. He returned home, attended college and did pioneering research in computer science. Jake's ground-breaking project, the Jasmine Model, made it possible for the U.S. to gain the upper hand over Russia. The rulers at the Kremlin took notice. Jake joined a top-secret government intelligence agency and began work to expand his Jasmine Model. Cold War Cyber Spy is a thrilling story filled with intrigue, espionage, romance, danger and espionage. The unfolding of events is packed with suspense, deception and betrayal. Cold War Cyber Spy is fast-paced, entertaining and packed with raw human emotion. You'll be drawn in from the beginning.

During the final three years of the Obama administration, Richard Stengel, the former editor of Time magazine and an Under Secretary of State, was on the front lines of the new global information war. At the time, he was the single person in government tasked with unpacking, disproving and combating both ISIS's messaging and Russian disinformation. Then, in 2016, as the presidential election

unfolded, Stengel watched as Donald Trump used disinformation himself, weaponizing the grievances of Americans who felt overlooked. In fact, Stengel quickly came to see how all three players had used the same playbook: ISIS sought to make Islam great again; Putin tried to make Russia great again; and we all know about Trump. In a narrative that is by turns dramatic and eye-opening, *Information Wars* walks readers through of this often frustrating battle. Stengel moves through Russia and Ukraine, Saudi Arabia and Iraq, and introduces characters from Putin to Hillary Clinton, John Kerry and Mohamed bin Salman to show how disinformation is impacting our global society. He illustrates how ISIS terrorized the world using social media, and how the Russians launched a tsunami of disinformation around the annexation of Crimea - a scheme that became the model for their interference with the 2016 presidential election. An urgent book for our times, *Information Wars* stresses that we must find a way to combat this ever growing threat to democracy.

As budgets tighten for school districts, a sound understanding of just how teaching and administration translate into student learning becomes increasingly important. Rebecca Barr, a researcher of classroom instruction and reading skill development, and Robert Dreeben, a sociologist of education who analyzes the structure of

organizations, combine their expertise to explore the social organization of schools and classrooms, the division of labor, and the allocation of key resources. Viewing schools as part of a social organization with a hierarchy of levels—district, school, classroom, instructional group, and students—avoids the common pitfalls of lumping together any and all possible influences on student learning without regard to the actual processes of the classroom. Barr and Dreeben systematically explain how instructional groups originate, form, and change over time. Focusing on first grade reading instruction, their study shows that individual reading aptitude actually has little direct relation to group reading achievement and virtually none to the coverage of reading materials once the mean aptitude of groups is taken into consideration. Individual aptitude, they argue, is rather the basis on which teachers form reading groups that are given different instructional treatment. It is these differences in group treatment, they contend, that explain substantial differences in learning curricular material.
