Introduction. Southern Africa is certainly not a naturally bounded area so that there are several possibilities for delineating it and concepts about its extent.

Wellington* discussed the various possibilities for delineation and suggested that one line stands out more clearly and definitely as a physical boundary than any other, namely the South Equatorial Divide, the watershed between the Zaire, Cuanza and Rufiji Rivers on the one hand and the Zambezi, Cunene and Rovuma Rivers on the other.

there are various possibilities for delineating it. Southern Africa then, as conceived here, covers an area of some 6 100 000 km² and is extremely varied both in biotic and abiotic aspects. This book concentrates on biogeographical patterns and their explanation in an historical and ecological way.
