Boat Engine

There are two main types of propulsion systems for boats – outboard motors and inboard engines. Outboard engines are designed specifically for boating, whereas inboard motors are usually just automobile engines that have been modified for marine use. Outboards are generally lower cost, lighter weight, achieve higher speeds and are easier to access for maintenance.

The two-stroke outboard engine is lighter, with more power for the same size, and offers better acceleration. It is favored for smaller, lighter boats, like dinghies. A four-stroke, or four-cycle, engine uses four strokes to complete the cycle. The first draws fuel and air into the combustion chamber.
