3. Return to HEADQUARTERS and find the MORGUE. Talk to the doctor to help you answer these questions. (A) Who was the victim? \_\_\_\_\_ (B) How long did death occur? \_\_\_\_\_ (C) What was the cause of death? \_\_\_\_\_ 4. Exit to the hallway and make your way to the LAB to process your evidence. Talk to WILLOWS and choose two pieces of evidence to analyze.

Supernovae and gamma-ray bursts are the strongest explosions in the Universe. Observations show that, rather than being symmetrical, they are driven by strong jets of energy and other asymmetrical effects. These observations demand theories and computations that challenge the biggest computers. This volume marks the transition to a fresh paradigm in the study of stellar explosions. It highlights the burgeoning era of routine supernova polarimetry and the insights into core collapse and thermonuclear explosions. With chapters by leading scientists, the book summarises the status of a fresh perspective

on stellar explosions and should be a valuable resource for graduate students and research scientists.

Does the book of Revelation describe in veiled language events of its writer's own day, or is it largely a prophecy of events still to come? In this revised BST volume, Michael Wilcock lifts the curtain on Revelation as a drama in eight scenes, highlighting the role of the imagination in grasping this fascinating and enigmatic book.

One of the most attractive features of the young discipline of Space Science is that many of the original pioneers and key players involved are still available to describe their field. Hence, at this point in history we are in a unique position to gain first-hand insight into the field and its development. To this end, *The Century of Space Science*, a scholarly, authoritative, reference book presents a chapter-by-chapter retrospective of space science as studied in the 20th century. The level is academic and focuses on key discoveries, how these were arrived at, their scientific consequences and how these discoveries advanced the thoughts of the key players involved. With over 90 world-class contributors, such as James Van Allen, Cornelis de Jager, Eugene Parker, Reimar Lüst, and Ernst Stuhlinger, and with a Foreword by Lodewijk Woltjer (past ESO Director General), this book will be immensely useful to readers in the fields of space science, astronomy, and the history of science. Both academic institutions and researchers will find that this major reference work makes an invaluable addition to their collection.

A collection of previously published technical papers on a variety of pyrotechnic topics. The articles have been reformatted into a 2-column, 8"x11" format with medium print. Only those articles which continue to be of interest and use to pyrotechnicians have been included. These materials are laser reproduced. Articles appearing in this collection are: Roman Candle Accident: Comet Characteristics Pyrotechnic Burn Rate Measurement: Interstitial Flame Spread Rate Testing Aerial Shell Augmentation Effects Feasibility Study on the Use of Nanoscale Thermites for Lead-Free Electric Matches Characterization of Pyrotechnic Reaction Residue Particles by SEM / EDS WARNING: Serious Product Malfunction Flowerpots and Muzzle Breaks Report on the Initial Testing of Suspect Tiger Tail Comets The Effect of Reflected Blast Waves in HDPE Mortars Electric Match Lead Splatters Color Values and Spectra of the Principal Emitters in Colored Flames Further Report on the Testing of Suspect Tiger Tail Comets Shogun Electric Match Connectors The Effect of Intentionally Caused Fire Leaks into 2-1/4-Inch Consumer Fireworks Shells Typical Mortar Recoil Forces Produced When Firing Spherical Aerial Shells Indoor Pyrotechnics? The Effect on Mortars of Explosions within Them

This volume contains the Proceedings of the Fifth Scientific Meeting of the Spanish Astronomical Society (Sociedad Espanola de Astronomia, SEA). The meeting was held at the Universidad de Castilla La Mancha in Toledo, from September 9 to 13, 2002. The event brought together 219 participants who presented their latest results in many different subjects. In comparison with the previous scientific meetings of the Society, the numbers of oral talks and poster contributions (122 and 64, respectively) are rapidly increasing, confirming that the SEA conferences are becoming a point of reference to assess the interests and achievements of astrophysical research in Spain. During the meeting, the SEA made public the granting of the Prize to the Best Spanish Ph. D. Thesis in Astronomy and Astrophysics for the period 2000-2001 ex aequo to Dr. A. Zurita and Dr. E. Villaver. This is the second time that the SEA is awarding this prize, which aim is to encourage young Spanish astrophysicists to pursue a high level scientific career. The Society is indebted to the Universidad de Castilla La Mancha, and, in particular, to the San Pedro Martir staff, for its hospitality. It is also indebted to the Local Organizing Committee for its dedication and the good atmosphere that prevailed at any moment, and to the Scientific Organizing Committee for its excellent work.

This is a print on demand book and is therefore non-returnable. Recognizing that many North Americans regard natural science and biblical teaching as at odds with each other, the authors (respected scientists who are also committed Christians) examine both the historical roots and the present manifestations of the science-versus-Bible tension, critique several of the misperceptions that encourage an adversarial approach, and offer reliable principles that the evangelical Christian community can use in determining what the Bible and science actually tell us about the physical universe and its formation.

The fourth edition of this popular book is a comprehensive introduction to particle physics, including the latest ideas and discoveries.

*Origins of Life: A Cosmic Perspective* presents an overview of the concepts, methods, and theories of astrobiology and origins of life research while presenting a summary of the latest findings. The book provides insight into the environments and processes that gave birth to life on our planet, which naturally informs our assessment of the probability that has arisen (or will arise) elsewhere. In addition, the book encourages readers to go beyond basic concepts, to explore topics in greater depth, and to engage in lively discussions. The text is intended to be suitable for mid- and upper-level undergraduates and beginning graduate students and more generally as an introduction and overview for researchers and general readers seeking to follow current developments in this interdisciplinary field. Readers are assumed to have a basic grounding in the relevant sciences, but prior specialized knowledge is not required. Each chapter concludes with a list of questions and discussion topics as well as suggestions for further reading. Some questions can be answered with reference to material in the text, but others require further reading and some have no known answers. The intention is to encourage readers to go beyond basic concepts, to explore topics in greater depth, and, in a classroom setting, to engage in lively discussions with class members.
