||Chaim|| Potok writes powerfully about the suffering of innocent people caught in the cross-fire of a war they cannot begin to understand. . . . Humanity and compassion for his characters leap from every page.
||San Francisco Chronicle
As the Chinese and the army of the North sweep south during the Korean War, an old peasant farmer and his wife flee their village across the bleak, bombed-out landscape. They soon come upon a boy in a ditch who is wounded and unconscious. Stirred by possessiveness and caring the woman refuses to leave the boy behind. The man thinks she is crazy to nurse this boy, to risk their lives for some dying stranger. Angry and bewildered, he waits for the boy to die. And when the boy does not die, the old man begins to believe that the boy possesses a magic upon which all their lives depend. . . .

For over 25 years, Thomas G. West has been a leading advocate for the importance of visual thinking, visual technologies and the creative potential of individuals with dyslexia and other learning differences. In this new book, he investigates how different kinds of brains and different ways of thinking can help to make discoveries and solve problems in innovative and unexpected ways. West focuses on what he has learned over the years from a group of extraordinarily creative, intelligent, and interesting people -- those with dyslexia, Asperger's syndrome, and other different ways of thinking, learning, and working. He shows that such people can provide important insights missed by experts as they also can prevent institutional "group think." Based on first-person accounts, West tells stories that include a dyslexic paleontologist in Montana, a special effects tech who worked for Pink Floyd and Kiss and who is now an advocate for those with Asperger's syndrome, a group of dyslexic master code breakers in a British electronic intelligence organization, a Colorado livestock handling expert who has become a forceful advocate for those with autism and a family of dyslexics and visual thinkers in Britain that includes four winners of the Nobel Prize in Physics. He also discusses persistent controversies and the unfolding science. This is an inspiring book that not only documents the achievements of people with various learning differences, but reveals their great potential -- especially in a new digital age where traditional clerical and academic skills are less and less important while an ability to think in pictures and to understand patterns using high-level computer information visualizations is rapidly increasing in value in the global economic marketplace.

"English is so illogical!" It is generally believed that English is a language of exceptions. For many, learning to spell and read is frustrating. For some, it is impossible... especially for the 29% of Americans who are functionally illiterate. But what if the problem is not the language itself, but the rules we were taught? What if we could see the complexity of English as a powerful tool rather than a hindrance? --Denise Eide
Uncovering the Logic of English challenges the notion that English is illogical by systematically explaining English spelling and answering questions like "Why is there a silent final E in have, large, and house?" and "Why is discussion spelled with -sion rather than -tion?" With easy-to-read examples and anecdotes, this book describes - the phonograms and spelling rules which explain 98% of English words - how English words are formed and how this knowledge can revolutionize vocabulary development - how understanding the reasons behind English spelling prevents students from needing to guess
The author's inspiring commentary makes a compelling case that understanding the logic of English could transform literacy education and help solve America's literacy crisis. Thorough and filled with the latest linguistic and reading research, Uncovering the Logic of English demonstrates why this systematic approach should be as foundational to our education as 1+1=2.

"After years of battling with a school system that did not understand his dyslexia and the shame that accompanied it, renowned activist and entrepreneur Ben Foss is not only open about his dyslexia, he is proud of it. || Have Dyslexia: This Does Not Define Who I Am|| Jennifer Smith
For the one in every five children who has dyslexia and the millions of others who struggle to read at their own grade levels and for their parents, teachers, tutors, families and friends.

"Human beings were never born to read," writes Tufts University cognitive neuroscientist and child development expert Maryanne Wolf. Reading is a human invention that reflects how the brain rearranges itself to learn something new. In this ambitious, provocative book, Wolf chronicles the remarkable journey of the reading brain not only over the past five thousand years, since writing began, but also over the course of a single child's life, showing in the process why children with dyslexia have reading difficulties and singular gifts. Lively, erudite, and rich with examples, Proust and the Squid asserts that the brain that examined the tiny clay tablets of the Sumerians was a very different brain from the one that is immersed in today's technology-driven literacy. The potential transformations in this changed reading brain, Wolf argues, have profound implications for every child and for the intellectual development of our species.
