## **Elementary Probability And Statistics A**

A probability gives the likelihood that a defined event will occur. It is quantified as a positive number between 0 (the event is impossible) and 1 (the

note that there is a overlap. Two red Jacks are there which fills both the criteria. So, we need to consider this overlap as we want to double count it once calculating the probability.

$$P ( J \text{ or red} ) = P (A) + P$$

# File Type PDF Elementary Probability And Statistics A Primer

$$P(\text{red}) - P(\text{J and red}) = 4/52 \\ + 26/52 - 2/52 = 0.538.$$
