"The comprehensive book Flood Risk Management in Europe: An exploration of Governance Challenges (2013) Description. In order to make European regions more resilient to flood risks a broadening of Flood Risk Management strategies (FRMs) might be necessary. The development and implementation of FRMs like risk prevention, flood defence, mitigation, preparation and ...

Flood Risk Management in Europe: An exploration of ...

Flood mapping is a crucial element of flood risk management. Directive 2007/60/EC on the assessment and management of flood risks will require Member States to prepare two types of maps by 2013 (art 6) : Flood hazard maps, showing the extent and expected water depths/levels of an area flooded in three scenarios, a low probability scenario or extreme events, in a medium probability scenario (at least with a return period of 100 years) and if appropriate a high probability scenario.

Flood mapping: a core component of flood risk management ...

Flood Risk Management is by definition dealing with uncertainty. Floods occur often enough, but the timing and location of flood events are uncertain, and so is the response of society. But the concepts and methods of flood risk analysis and management are progressively tuned to deal with this kind of uncertainties.

FLOODrisk 2020 | 21st June - 25th June 2021 | Budapest

The European Union is addressing flood risk through the Floods Directive. Countries are required to draw up flood risk maps by 2013 and establish flood risk management plans focused on prevention, protection and preparedness by 2015. In April 2013 the European Commission adopted a Communication on an ' EU strategy on adaptation to climate change ' which aims at contributing to a more climate resilient Europe.
