The discovery of neutrino oscillations opened a new era in neutrino physics: an era of investigation of neutrino masses, mixing, magnetic moments and other neutrino properties. After the establishment of the Standard Model of the el-

The heaviest neutrino mass might be of order of $1 \sim 10$ eV. A neutrino or neutrinos of this mass range can explain the small scale region of the power spectrum in the form of hot dark matter. Currently, however, the most promising way to probe the neutrino mass is considered to be the neutrino oscillation experiments. The

"Neutrino Physics" Neutrino physics has become one of the most active areas in particle physics and related fields, especially after the discovery that neutrinos have mass and mix. This is the only palpable evidence we have that the Standard Model of particle physics is incomplete.
