Reinforced plastics (FRP), are synthetic materials comprised of reinforcements (fibers) and a matrix (resin). On their own, these materials only provide limited use, however combined into a composite the new material provides many useful advantages. In composites the reinforcing fibers are used to resist tensile and

Adhesive joints may be present. The overall strength of the joint or connection, as well as the appearance, may be improved by taping with FRP tape or strips of FRP mat, together with polyester or epoxy resin. The resin and glass used in this process must be prepared by the methods recommended for adhesive joints.
