multiplying and dividing integers (positive and negative). You will learn the general rules that apply to every problem. For example, when multiplying or dividing two negative integers, the product or a quotient is positive. When one of the integers is negative and the other one is positive, the result is always negative.

While multiplication is totaling of integers, division on the other hand is the distribution of integers. We can simply say that, division is the inverse of multiplication. The rules of dividing integers are similar to the rules of multiplication. The only difference in division is that the quotient may not necessary be an integer.

Multiplying and dividing with integers. You also have to pay attention to the signs when you multiply and divide. There are two simple rules to remember: When you multiply a negative number by a positive number then the product is always negative. When you multiply two negative numbers or two positive numbers then the product is always positive.

multiplying integers lesson 2 1 answer key, Notice that 2 and 4 are positive. In general, when multiplying integers, remember the followings: Positive  $\times$  Positive = Positive For example,  $7 \times 6 = 42$   $2 \times 5 = 10$   $3 \times 10 = 30$   $8 \times 2 = 16$  Now, try adding  $-3$  to  $-3$
