Following are the main operations of transaction: Read(X): Read operation is used to read the value of X from the database and

# Access Free Transaction

stores it in a buffer in main memory.

Write(X): Write operation is used to write the value back to the database from the buffer. Let's take an example to debit transaction from an account which consists of following operations:

Processing

Concepts And  
Techniques The  
(豆瓣)

The transaction concept emerges with the following properties:  
Consistency: the transaction must obey legal protocols.

Atomicity: it either happens or it does not; either all are bound by the contract or none
