Priya Introduction to Ad-Hoc Wireless Networks in Hindi Wireless Ad Hoc Networking Personal

A wireless ad-hoc network (WANET) is a type of local area network (LAN) that is built spontaneously to enable two or more wireless devices to be connected to each other without requiring a central device, such as a router or access point. When Wi-Fi networks are in ad-hoc mode, each device in the network forwards data to the others.

What is an Ad-Hoc Wireless Network?

Wireless Ad Hoc Networking:

...

The term ad hoc is a Latin word that literally means "for this," implying improvised or impromptu. Ad hoc networks are mostly wireless local area networks (LANs). The devices communicate with each other directly instead of relying on a base station or access points as in wireless LANs for data transfer co-ordination.
